NEW LEASE OPTIONS:

Used hotel units for sale: 12000 Euro each, fully equipped

The units

Tempohousing now offers from stock in Amsterdam 200 hotel rooms that are ready to go. The modules are based on 40 ft standard shipping and the rooms consist of 2 connected containers (shipped separately) and the 2 containers offer 2 completely equipped rooms. The access to the rooms is through external walkways, that can be ordered separately. For colder climates, the walkways can be provided with a facade system to offer protection against weather conditions or noise from highways or airports.

The rooms

The hotel rooms measure about 4,7 x 6 meter and with a floorspace of about 24 m2 they can meet hotel room standards for 4-star ratings. A basic set of furniture is included but can be adapted to exact wishes of the customer. Upon request the white painted walls and ceiling can be changed to other colour schemes

Fast and affordable

This is an ideal solution for companies in the market in need of a quick and ready-to-go solution at the best available price. The modules can be used for student housing, hotel solution and staff accommodation, they can sleep from 1 to 4 persons per room. Additionally, Tempohousing can design your entire project and also offers services for logistics and on site support and supervision.

Used, but looking good!

Although the modules are used, the interior is in mint condition with new amenities and furniture. A heating system comes standard and air-conditioning can be added optionally. The large windows and the spacious set up of the rooms give the right look and feel of up-market hotel rooms or mini-apartments. With the use of quick to assemble facade system for the outside of the building, the image of the containerized construction system completely disappears. The units can be transported and handled with standard equipment for 40 ft freight containers available anywhere in the world.

The Servotel in Port-a-Prince, Haiti is nearing completion!

The Tempohousing prefab rooms in the hotel already are in use and available for [booking](#).

As can be seen on the Servotel [Facebook page](#) there is quite some progress in finishing the common areas of the hotel. A temporary reception building is now in use for the main hotel facilities, as well as the outdoor pool, ready for a refreshing swim. Also check their website: www.servotelhaiti.com.

Tempohousing congratulates the Servotel management with the achieved results so far and hopes this adds to rebuilding Haiti.

Tempohousing frequently sends a newsletter to its subscribers by e-mail with information on new projects, products or developments. Do you want to receive our newsletters in the future?
